Orbitage Non-technical Series

# Essentials of IP

*"A straightforward, no-nonsense approach to vital issues"*

## Overview

From its cold-war origins in the late 60s, the Internet Protocol (IP) has now emerged as the dominant force in networking and telecommunications. We have seen the convergence of the voice and data networks, and soon we will see the convergence of traditional fixed-line and mobile networks. IP is the enabler of both these convergences.

As part of our non-technical series, this interactive session answers fundamental questions regarding IP and its implications for the TelCo in a clear and concise manner. Highlights include real-world examples as well as simple demonstrations.

## Answers the Questions

- What is the Internet?
- What is the Internet Protocol?
- How does data get from one place to another?
- How is it different from the telephone network?
- Is it secure and reliable?
- What are the key IP services & applications?
- Why has it become so important for the telecoms industry?

## Who can benefit

This course is specifically designed for staff who are non-technical but require a high-level overview of key issues and an explanation of jargon. It is ideal for those from sales, marketing, business development, logistics, etc.

## Pre requisite knowledge
